

The Batawa House/ Rooms on a Garden

Ground Floor/ Lot Plan

Second Floor Plan

Basement Plan

The one room wide house is sited along the north border of its lot, its wide frontage opening onto a large garden and patio area to the south. The garage on the north side provides a garden wall to the neighbour to the north and has a green roof enhancing the view for that adjacent house.

The houses and garages are arranged on the lots to positively define and make habitable the outdoor places- streets, gardens, and patios, leaving no residual or wasted space so often found in suburban single family housing.

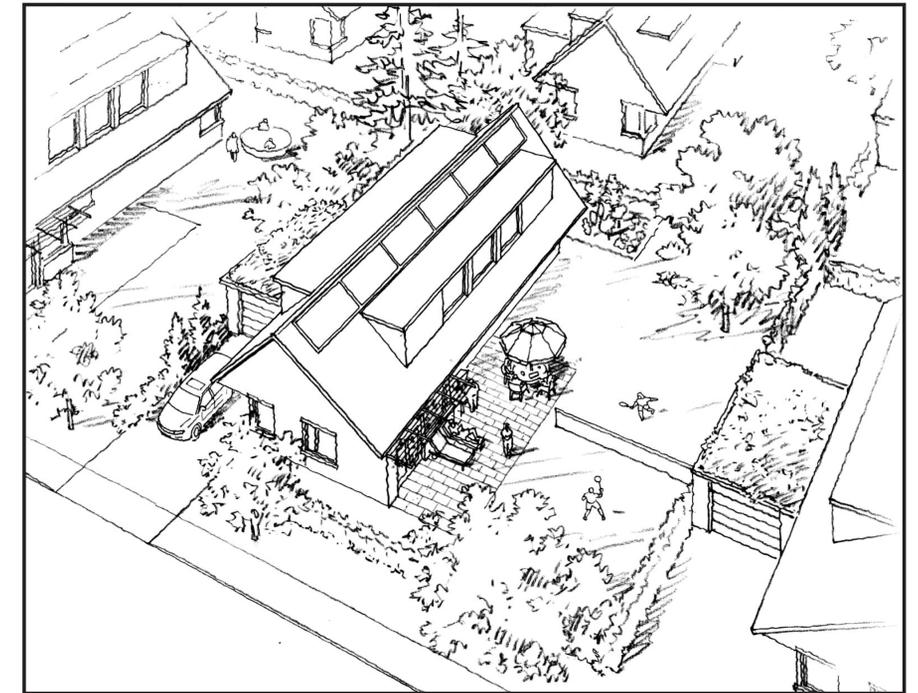

Every room in the house has south facing windows looking onto the garden. Overhangs and a trellis on the south side provide shading from the mid-day summer sun. The one room wide organization of the house ensures passive through ventilation and an abundance of natural light throughout.
